**Subject:** Recycled Water Policy - Water Quality Orders  
**Attachments:** ATT00001.txt; Order\_ER\_package.pdf; Order\_LI\_package.pdf; Electronic Mailing List\_RWPSO.xlsx

Good Morning,

You are receiving this email as a member of the NPDES roundtable and to alert you to two water quality orders that will be mailed to wastewater and recycled water permittees on Monday, July 29<sup>th</sup>. These orders are being issued to update permit monitoring and reporting requirements consistent with Resolution No. 2018-0057, amending the Water Quality Control Policy for Recycled Water (Recycled Water Policy).

In the attached file "Order\_ER\_package.pdf" is the water quality order that applies to approximately 900 permittees and amends permit monitoring and reporting programs to require permittees to annually report monthly volumes of influent, wastewater produced, and effluent, including treatment level and discharge type. As applicable, permittees will be required to annually report recycled water use by volume and category of reuse. Data reporting is mandatory for all recipients of the order, and permittees are required to report calendar year 2019 data by April 2020. These data, which will be made publicly available, will assist the State Water Board in evaluating future potential for increased recycled water use statewide, as required in Resolution No. 2017-0012, Comprehensive Response to Climate Change.

In the attached file "Order\_LI\_package.pdf" is both the electronic reporting order above as well as an additional order which applies to approximately 50 permittees to remove permit monitoring requirements for priority pollutants in recycled water used for landscape irrigation application.

Also attached is a spreadsheet with a sortable list of the facilities that will be receiving these water quality orders. The first column of each tab in the spreadsheet allows you to sort by region. The first tab includes wastewater treatment plants, recycled water plants and potable reuse facilities. These will all receive the electronic reporting executive order.

The second tab includes the landscape irrigation projects that will receive the executive order to remove priority pollutant monitoring. These facilities will also be issued the executive order for electronic reporting. The third tab lists the facilities that were removed and the reason why they were removed.

Please let myself or Rebecca Greenwood ([Rebecca.greenwood@waterboards.ca.gov](mailto:Rebecca.greenwood@waterboards.ca.gov)) know if you have any questions or concerns.

Thank you,  
Tricia
